

Information on opening windows – ventilate, please help us save energy:

We have deliberately installed casement windows instead of tilt windows. To ventilate rooms thoroughly, please open the window completely for 5 to 10 minutes. This is the most efficient way to ventilate.

Please secure the window at night in summer and/or when the wind picks up using the doorstop.

Good to know: Your room is automatically ventilated three times a day for 20 minutes at a time.

Tip for protection against mosquitoes and flies: Do not open the windows on the sunny side and turn off the lights at night before opening a window. Some of the windows on the south and west sides are equipped with fly screens.

By the way:

-  We heat with district heating from biomass, supported by solar panels on the roof.
-  We obtain electricity from certified hydropower and from our own photovoltaic system.
-  We obtain our water from the Stooswald spring in Morschach.
